

Electric Vehicle Extrication Class

June 25th at 8:30am

About Next Level Extrication

Owner Paul Shoemaker has an extensive background in extrication. He has worked with Tesla to get hands on experience cutting into electric vehicles and getting a better understanding of the current safest approach to extricating electric vehicles. He currently works with NFPA and UL as their SME on their advisor board.

All of Next Level Extrications instructors come with an extensive background in extrication and a strong focus on electric vehicles and stabilization.

Please check out their Facebook and Instagram page for more details.

Course Description

Next Level Extrication is coming to Hygiene Fire Department. During this 1-day class students will learn everything from basic to advanced extrication techniques with an emphasis on Electric Vehicles. Students will gain a better understanding on what challenges they will face when dealing with EV's as well as the challenges associated with ultra-high strength steel and how to overcome these challenges when and incident happens in their district. During the advanced portion of the extrication class student will gain an extensive knowledge on proper stabilization and lifting angles. Course is split into PowerPoint and hands-on.
