

LAFAYETTE FIRE DEPARTMENT

PRESENTS

NOZZLE FORWARD

This sought after class is the ongoing development of an in-depth study of all things engine. It is not a “what if” class, it is a program designed to ingrain the nozzle team to make the right choice and be able to accomplish whatever task is necessary for a successful interior attack. It is not theory; it is proven on firegrounds around the country. Adapted from a variety of sources, but reconstructed to be based around simple principles that maximize mechanical advantage. The class answers the “whys,” not just the “what’s,” and quickly creates a system that can be adapted to fit any engine company from the urban to the rural.
